

To Whom It May Concern,

It is my great pleasure to highly recommend Popov Vitalii, a student at the Higher School of Economics, for admission to a master's program in Computer Science.

I have started my acquaintance with him since he enrolled in my Databases course in 2021. The course focused on the theoretical foundations, design principles, and implementation techniques for modern database systems. Vitalii used various theoretical knowledge of database management, data modeling, and conceptual design E/R diagramming.

Vitalii also took my elective course Distributed Databases and Data Warehouses. There was a practice – working with indexing. He was familiar with techniques as it is seen in the seminars and group projects. His practical skills are admirable.

Then I became his scientific advisor for the 3rd grade semester project “Service for the visual construction of a database with subsequent maintenance”. This tool for databases required knowledge about scheme creation. He successfully passed this challenge.

I am confident that Vitalii possesses the necessary skills and knowledge to excel in a master’s program in Computer Science. I believe that Vitalii will be a valuable addition to the program and wholeheartedly recommend him for admission.

Please don’t hesitate to contact me if you need additional information on the matter.

Respectfully,
Alexander Breyman

Associate Professor, Ph.D.,
Invited scholar,
Computer Science Faculty, Software Engineering School,
National Research University – Higher School of Economics
